

Important Information—Read Me First!

You must insert the included CD-ROM into your computer, and run the installer application BEFORE you install the upgrade hardware!

If you do not run the installer application before installing the upgrade hardware, your computer will not operate.

To ensure a successful installation, read and carefully follow every step in the enclosed Quick Start Guide.

Important Information only for Crescendo®/WS G4 Processor Upgrade Card Users

Do you have Mac OS X installed on your PowerBook? If so, you must download and run *Sonnet X Tune-Up* to enable your Crescendo/WS G4-upgraded PowerBook to switch between startup disks.

This software is free. Point your web browser to www.sonnettech.com/downloads/osx_upgrade_sw.html#tuneup, and then download the file and run the application.

Sonnet X Tune-Up installs a special control panel that enables you to switch between Mac OS 9.x and Mac OS X on your PowerBook; *without this special control panel, switching between operating systems will not be possible.* Please note, you must run Sonnet X Tune-Up under Mac OS 9.1.x or OS 9.2.x.
